CB Subs Use Case

Brief

Client requires that new CB Subs plan members should be automatically subscribed to Kunena categories on membership approval

Method

CB Subs SQL Action

Detail

There is no easy way to subscribe members to Kunena categories unless the members do it themselves. However, this client wanted to force subscription and thus engagement in the forums.

The table that controls the category membership is 'kunena_user_categories', which contains 6 values - 'user_id', 'category_id', 'role', 'allreadtime', 'subscribed', 'params'

Therefore, install and publish the CBSubs SQL actions plugin.

Go to the Plan in question > Integrations > SQL actions

Choose 'Internal' action on activation.

Use the SQL Command

```
INSERT INTO `dbprefix_kunena_user_categories`  
(`user_id`, `category_id`, `role`, `allreadtime`, `subscribed`, `params`)  
VALUES ([user_id],category_id_number,0,NULL,1,"");
```

This will subscribe the user, on plan activation, to the specified Kunena category – to subscribe to more than one category just repeat the command changing the 'category_id_number' variable accordingly

Kind regards

Mike Kiy
