## Payment gateway settings

Type of payment gateway: Paypal

Name of gateway account: SRI-CONNECT Paypal

Ordering: 1 (SRI-CONNECT Paypal)

## PayPal

Enter your PayPal account settings below. Your Paypal account level (Premier and Business) must support website payments. Paypal settings:

You must also enable IPN (Instant Payment Notification), Auto-return and PDT (Payment Data Transfer) in your paypal account:

Go to: My Account: Profile: and in column 'Selling Preferences':

- for PDT: Website Payment Preferences: Auto Return for Website Payments: Turn Auto Return to ON and enter homepage of your site, e.g. <http://www.example.com> as Return URL (that URL is not very important, you can use same account on multiple websites, as this software sends return URLs with each payment), then turn Payment Data Transfer to ON on same page. Finally leave Encrypted Website Payments off to start easily (you can turn them on later, as this software supports it, see below). Set PayPal Account Optional to ON so that users don't have to register with paypal to pay with credit-cards. Save page and return to page to get your Identity Token to paste in the field below.
- For IPN: In My Profile, click Instant Payment Notification Preferences, then Edit. Activate Instant Payment Notification and put your site URL e.g. <http://www.example.com/> as Notification URL (here too, not very important, as this software sends notification URL with each payment). Then Save.
- For automated transaction acceptance in foreign currencies: In My Profile, click Payment Receiving Preferences: set "Block payments sent to me in a currency I do not hold" to "automatically accept and convert". Also for Sandbox accounts, The "Payment Review" parameter should be disabled in your PayPal Sandbox account, otherwise payment will not be completed without manual intervention in the paypal management platform.

and you are done with your Paypal profile settings.

Enable PayPal: Enable single payments
